MAWBANNA ANGUS SALE DETAILS

- 1. Location:** See map inside front cover. Mawbanna turn off is approx. 50 minutes west of Burnie on the Bass Highway. Mawbanna Angus is 23.3 klms in-land from the Mawbanna turn on the Bass Highway.
- 2. Vendor Credit:** Up to 3 months vendor credit to approved clients. Payment due on 7th July 2011.
- 3. Sale:** To be held at the property under the Helmsman system.
- 4. Inspection:** All bulls may be inspected at the property on the morning of sale.
- 5. Bull Weights:** Available on sale day.
- 6. Health Tests:** See veterinarian letter.
- 7. Guarantee:** All bulls offered have been semen tested and guaranteed to be fertile and capable of natural service at the time of the sale. No warrantee is given for any bull that is unable to serve due to injury or disease. A veterinarian certificate must accompany any claim. A replacement bull (if available) may be provided, or credit given at the next bull sale (less salvage rights). This guarantee is valid for a period of 12 months from the day of sale.
- 8. Rebate:** 3% rebate commission offered to outside agents introducing buyers in writing 24 hours prior to sale.
- 9. Insurance:** The buyer is immediately responsible for the stock purchased on sale day. It is recommended that the buyer insures the purchase at this stage. For full details about insurance cover of livestock, please check with the agent who is operating the sale.
- 10. Transport:** Bulls purchased may be collected on sale day.
- 11. HBR/APR:** Some bulls are Herd Book registered (HBR), others are Angus Performance Registered (APR). Please notify the agent if you require a transfer of registration.
- 12. Refreshments:** Available at sale.

MAWBANNA ANGUS STUD NOTES

Welcome to the 2011 Mawbanna Angus Bull sale.

After 40 years of breeding Angus at Mawbanna, the breeding policy is still the same. We aim to breed cattle that grow fast and have high intramuscular fat which is what consumers of high quality meat are looking for.

We also concentrate on fertility, and all females that do not get in calf to calve at 2 years of age, and all females that do not get in calf after 8 weeks of mating are culled irrespective of pedigree.

All bulls have been fertility tested and are fertile.

The bulls on offer are a good mix of American and Australian bloodlines by proven AI sires that are in the top estimated breed values for Australian and American bulls, with up to 99% reliability for the main money making traits. We feel that these bulls will increase the profitability of the herds they go to.

All sale bulls have been tested AMF or are AMFU, and NHFU (please see veterinarian letter for further details).

Prospective buyers and visitors welcome.

MAWBANNA ANGUS VETERINARIAN LETTER

Mawbanna Angus is committed to producing cattle of high genetic merit in good health and body condition. With this in mind they have established a comprehensive health plan in close consultation with Smithton Veterinary Service.

Cattle are fully vaccinated with 7 in 1, are treated routinely with trace elements (Copper, Cobalt and Selenium) and are treated for internal and external parasites as required with high quality products.

Mawbanna Angus is part of the Johnes Market Assurance Program, and currently have a status of MN2.

Recent Australian research has shown that BVD/Pestiviruses or Mucosal Disease is having a significant economic impact on the beef industry.

These include reproductive effects such as:

- Abortions
- Decreased pregnancy rates
- Calf deformities
- Reduced bull longevity in the breeding herd

Growth rates of calves pre-weaning, and cattle in feedlots may also be affected.

Mawbanna Angus has taken the measure of testing sale bulls to ensure they are not persistent carriers of this disease (or PI's). In addition bulls will all be vaccinated against Pestivirus. This will minimize the risk of these bulls becoming infected if working in a herd where BVD is present.

Curly Calf Syndrome has recently been identified as a genetic problem in some Angus cattle. The syndrome causes calves to be born dead or deformed. Mawbanna Angus has undertaken DNA testing of all sale bulls to ensure they are not carriers of this syndrome giving commercial producers piece of mind that Mawbanna Angus bulls will not pass on this trait to their offspring.

All bulls have also undergone a veterinary examination prior to sale to ensure feet, gait, eyes and pizzles were sound at that time. Testicles and internal reproductive organs have also been palpated and testicles measured to ensure bulls meet breeding standards. As an added guarantee bulls have also had a semen sample collected prior to sale. This sample has been tested for motility, concentration, live/dead ratio and individual sperm morphology. Only bulls free of semen defects and with adequate motile sperm at the time of testing would be put up for sale.

This health program is comprehensive and will help meet the aim of high quality healthy cattle production by Mawbanna Angus.

Your partner in animal health

15th March, 2011

To Whom It May Concern

This is to certify that on the 1st of February and the 1st of March 2011, Craig Dwyer from Smithton Veterinary Service examined 9 bulls owned by Mawbanna Angus at Mawbanna, Tasmania. Eyes, feet, legs, gait, pizzle, testicles and body condition were assessed. The bulls were in excellent body condition, were sound on general physical examination and no abnormalities were detected on palpation of the testicles and internal reproductive glands. Measurement of the testicles was also carried out as well as semen collected from each bull. Semen was assessed for motility, concentration, amount of live semen and semen defects. All bulls in the table below had adequate amounts of live healthy semen (>70%) and are listed with their respective scrotal circumference and semen results.

Tag/Freeze Brand Number	Scrotal Circumference (cms)	Semen % Normal	Semen Live/Dead %
E1	38	87	98
E12	42	77	91
E20	41	78	97
E25	39	73	99
E30	41	84	96
E43	44	71	98
E46	40	76	97
E47	37	78	98
E64	38	84	100

Please note it is generally accepted that a scrotal circumference of >32 cm at 2 years of age in all breeds indicates adequate testicle development.

These bulls also returned a negative test result for BVD antigen using the ear notch test. This means these animals are not persistently infected (PIs) with BVD.

All bulls have also been identified as non AM DNA carriers by the University of Queensland, this means that these bulls do not carry the genes responsible for "Curly Calf Syndrome".

Yours faithfully,

(Craig Dwyer B.V.Sc. M.A.C.V.S. for Smithton Veterinary Service)
